DETAILED ACTION

Allowable Subject Matter

1. Claims 1-20 are allowed.
2. The following is an examiner's statement for reasons for allowance:

Claims 1, 12 and 16 are allowable over the prior art of record since the cited references taken individually or in combination fails to particularly disclose **means for designating TCP formatted data for conversion to UDP formatted data, means for converting said designated TCP formatted data into UDP formatted data, and means for transmitting TCP formatted data and UDP formatted data to said plurality of stations in a point-to-point broadcast mode or in a point-to-multipoint broadcast mode to efficiently utilize the bandwidth of said transmitter and to avoid duplication of transmission of the same data**. It is noted that the closest prior art, Katseff at el. (US Patent 6,320,875) shows communication system for providing more efficient and higher quality of service in applications such as Internet telephony. In one aspect of this approach, transmission control protocol ("TCP") is used to send data from a first user or client over standard telephone lines to a local Internet service provider ("ISP"). At the ISP, the data packets are converted from TCP to user datagram protocol ("UDP"). The UDP packets are then transmitted, typically over a higher bandwidth link to another local ISP serving the recipient. The UDP packets are

translated back to TCP packets and routed to the receiver. However, Katseff et al. fails to disclose or render obvious the above underlined limitations as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a) Katseff et al. (U.S. 6,320,875) Methods and apparatus for providing improved quality of packet transmission in applications such as Internet telephony.

b) Latif et al. (U.S. 6,400,730) Method and apparatus for transferring data between IP network devices and SCSI and fiber channel devices over an IP network.

c) Kamiyama et al. (U.S. 6,674,541) Method for transmitting facsimile data between facsimile apparatuses through an internet protocol network and relay apparatuses used in the method.

d) Yu et al. (U.S. 6,684,087) Method and apparatus for displaying images on mobile devices.

e) Dickerman et al. (U.S. 6,160,874) Validation gateway.
